

Intact iQ: Module

Transport Scheduler

The Intact iQ Transport Scheduler module enables you to create and effectively manage your delivery schedules within your Intact iQ ERP system. It provides you and your entire team with end-to-end visibility and control of your orders from the point of purchase to the point of delivery.

Digital Fleet

Clipboards with delivery orders are commonplace in most merchant yards and distribution warehouses. But this paper-based way of working is a thing of the past. With Intact iQ, your deliveries can now be scheduled in your system and sent automatically to your driver's mobile devices, along with any supporting documentation. All vehicles and related deliveries are tracked in real-time with data auto-fed back to your ERP system.

The Benefit to your Business

- End-to-end visibility across your organisation
- Reduce scheduling time
- Create more efficient routes
- Improve customer communications
- Maximise fleet utilisation
- Intuitive, easy to use solution

The Intact Transport Scheduler module provides your logistics team with full visibility and management of your transport schedules, from within your Intact iQ ERP system.

We appreciate the familiarity and instilled routine your logistics team may have with your current paper-driven delivery processes. But we can enhance it. We can make it paper-less. And we can ensure your entire team has optimum visibility and control of your logistics operation, in real-time. This is simply achieved by housing this data and the related transport scheduling functionality in your ERP system.

Designed to help cut down on logistic query phone calls, the Intact Transport Scheduler module will free up valuable time for your team and improve customer query response times.

Key Features

1. End-to-End Visibility and Control of your Deliveries

The Intact Transport Scheduler adopts a calendar style view, akin to Outlook, and encompasses drag and drop functionality. It enables you to quickly and easily assign your orders, stock transfers, pick-ups etc. to a particular delivery date, vehicle and driver to create your delivery schedules. If you need to transfer an order to another vehicle, you simply shuffle the sequence of the delivery drops. The drag and drop functionality makes this process quick and seamless with all changes recorded and updated in your Intact iQ system.

2. Maximise Vehicle Capacity

Vehicle weight capacities are aligned to the assigned delivery orders and will auto-signal where capacity has been reached. In addition, the line

level components of each order are also displayed to enable your logistics team to optimise vehicle capacity.

3. Map Based Journey Planning

The Intact Transport Scheduler includes visual planning functionality enabling you to view your delivery drops on a map. Based on the location of the drops you can drag to select route clustered drops and place them on a new delivery journey automatically.

4. Process Automation

Once orders are assigned to a delivery schedule this status is auto-updated on the sales order so your entire team has visibility of the delivery status of this order. From there you can directly create your picking or delivery note. Your drivers will then view their appointed journeys on their mobile phones via our Intact Access app.

5. Vehicle & Route Tracking

Direct integration with your vehicle tracking software provides real-time visibility of the exact location of your vehicles, your delivery locations and drops yet to be delivered, from within your Intact iQ ERP system. You can also view the delivery route and calculate travel time required for the delivery schedule in advance. This enables your logistics team to make changes if the journey time is not feasible.

6. Live Delivery Updates

Once the order has been delivered, your drivers can record contactless PODs (signature and/or photo) on their mobile phone using the Intact Access App. This POD information and the exact date, time and location of the delivery is fed directly back into your Intact iQ ERP system, live.

7. Fleet Management

Your vehicles can be grouped by user or branch with only the relevant vehicles appearing for the user scheduling your deliveries.

8. Forward Journey Planning

Your delivery routes can also be planned in advance for any regular delivery runs you may have.

9. Offline Functionality

The Intact Access App allows your drivers to capture POD information even in areas where they have no signal. Once signal returns your Intact iQ system will be auto-updated with this data.

Plan your delivery schedules quickly and efficiently, whilst providing your team and customers with complete visibility of the order cycle.
